

## LABORATORY

# Blood Collection Sets

Winged "butterfly" sets for small, fragile or moving veins — the flexible tubing keeps the needle steady while you fill your tubes.

## Overview

When a patient is small, dehydrated or simply will not hold still, a winged blood collection set gives you a stable, low-angle draw. Soft, flexible wings act as a grip during insertion and as an anchor once taped down, while the transparent tubing shows flash immediately.

Each set ends in a Luer adapter that accepts a tube holder or a syringe, so one product covers both evacuated-tube and syringe draws.

## Key features

- Flexible wings for controlled, low-angle insertion
- Ultra-thin-wall needle for maximum flow at small gauges
- Transparent kink-resistant tubing (7" / 12")
- Luer adapter for tube holder or syringe
- Gauges 21G, 23G and 25G
- Sterile, latex-free, single-use

## Specifications

|                      |                                                  |
|----------------------|--------------------------------------------------|
| <b>Gauges</b>        | 21G, 23G, 25G                                    |
| <b>Tubing length</b> | 7" (18 cm) or 12" (30 cm)                        |
| <b>Connector</b>     | Luer adapter with pre-attached holder (optional) |
| <b>Sterilization</b> | Ethylene oxide (EO)                              |
| <b>Packaging</b>     | Individual blister; 50 units per box             |

## Applications

- Feline and small-breed blood sampling
- Exotics and neonates
- Patients with fragile or rolling veins
- Short-term IV medication administration
