

IV THERAPY

IV Administration Sets

Macro- and micro-drip IV sets built for reliable fluid therapy — from a 2 kg cat on a 60 drops/mL set to a horse on a large-bore line.

Overview

Fluid therapy is only as accurate as the giving set. Our administration sets pair a clear, rigid drip chamber with a precision roller clamp so rates hold steady during long infusions, and a needle-free Y-injection site lets you add medication without breaking the line.

Sets are available with vented or non-vented spikes for bags and bottles, with or without a 15 µm in-line filter, and in lengths suited to cages, stalls and surgical tables.

Key features

- 10, 15 and 20 drops/mL macro-drip; 60 drops/mL micro-drip
- Vented / non-vented sharp spike with protective cap
- Rigid transparent drip chamber with 15 µm filter
- Precision roller clamp holds rate without creep
- Latex-free Y-injection site and rotating male Luer lock
- DEHP-free tubing, 180 cm to 300 cm

Specifications

Drop factors	10 · 15 · 20 drops/mL (macro) · 60 drops/mL (micro)
Tubing length	180 cm, 210 cm, 300 cm (large animal)
Spike	Vented or non-vented, ISO 8536 compatible
Connector	Rotating male Luer lock with cap
Packaging	Individual pouch; 50 units per box

Applications

- Maintenance and resuscitation fluid therapy
- Constant-rate infusions with pumps or gravity
- Anesthetic and post-operative support
- Large-animal fluid administration
