

IV THERAPY

Winged Infusion Sets

Flexible winged infusion sets for short-term intravenous access, bolus medication and small-volume fluid therapy.

Overview

A winged infusion set is the fastest way to establish reliable venous access in a cat, small dog or exotic patient. The soft wings fold together for a controlled insertion and lie flat for taping, while the 30 cm tubing keeps the connection away from the puncture site so movement does not dislodge the needle.

Each set is primed with a Luer lock connector and protective cap, ready for a syringe or an IV administration set.

Key features

- Gauges 21G, 23G, 25G and 27G with ultra-sharp tri-bevel tips
- Soft, flexible wings for grip and secure taping
- 30 cm transparent, kink-resistant tubing
- Luer lock connector with protective cap
- Colour-coded wings by gauge
- Sterile, latex-free, single-use

Specifications

Gauges	21G, 23G, 25G, 27G
Needle length	¾" (19 mm)
Tubing	30 cm PVC, DEHP-free
Connector	Female Luer lock
Packaging	Individual blister; 50 units per box

Applications

- Bolus IV medication in cats and small dogs
- Short-term fluid therapy
- Blood sampling in patients with small veins
- Exotic and neonatal patients
